AICTE INDUSTRIAL INTERNSHIP REPORT
ON
JAVA FULL STACK DEVELOPMENT
PROJECT

Foodie – Food Delivery Website UI Design

Internship Platform: upSkill Campus

Internship Duration: Four Weeks

PREPARED BY

KOMALPREET KAUR

Roll No.: 2512716

Internship Start Date	10 June 2026
College / Institute	CT IT
University	I.K. Gujral Punjab Technical University (IKGPTU)

GitHub Repository: upskillcampus

2026

EXECUTIVE SUMMARY

During my four-week AICTE Industrial Internship in Java Full Stack Development, I gained valuable knowledge about the fundamentals and practical applications of web development. The internship helped me understand the importance of Java Full Stack Development in the modern software industry, where both front-end and back-end technologies are used together to develop complete, interactive, and functional web applications. Throughout the internship, I learned the basic concepts of Java, including its role in application development, programming fundamentals, and how Java can be used as a powerful technology for developing the back-end of websites and web applications. I also learned about HTML tags and the basic structure of web pages, along with other important concepts related to website development and user interface design. The training helped me understand how different technologies work together to create a complete website and how a developer can move from the basic structure of a webpage to a functional web application.

As a part of this internship, I worked on the project “Foodie – Food Delivery Website UI Design”. The project focused on designing the user interface of a food delivery website, including a homepage and a login page. Through this project, I learned how to plan the layout of a website, arrange different sections, design navigation elements, and create a user-friendly interface. The practical project work helped me connect the theoretical concepts learned during the internship with a real-world application.

Overall, this four-week internship was a valuable learning experience. It improved my understanding of Java Full Stack Development, website structure, HTML tags, programming concepts, and the process of developing and designing web applications. It also helped me develop practical skills, improve my problem-solving approach, and gain confidence in applying technical knowledge to a project. The internship provided me with a strong foundation for continuing my learning in web development and exploring more advanced technologies in the future.

ACKNOWLEDGEMENT

I sincerely express my gratitude to CT Institute of Engineering & Technology (CT IT), I.K. Gujral Punjab Technical University (IKGPTU), AICTE, and upSkill Campus for providing me with the opportunity to complete my four-week AICTE internship in Java Full Stack Development.

I am thankful to my mentors, faculty members, family, and friends for their valuable guidance, encouragement, and support throughout the internship and in the completion of this report.

Name: Komalpreet Kaur

Introduction

This report presents the learning experience gained during a four-week AICTE Internship in Java Full Stack Development through Upskill Campus. The internship introduced me to the complete process of developing modern web applications using front-end technologies, back-end programming, databases, APIs, and development tools.

During the internship, I learned the basics of HTML, CSS, JavaScript, and Java . I also gained an understanding of databases, APIs, and the role of Java in developing reliable and scalable web applications.

Java Full Stack Development is important because it provides knowledge of both the user interface and the server-side functionality of an application. This internship helped me understand how different technologies work together to create complete web applications and provided me with a strong foundation for further learning and development in the field of software technology.

Internship objectives

The main objective of this four-week AICTE Internship in Java Full Stack Development was to gain a basic understanding of modern web application development and learn how different technologies work together.

The key objectives were to:

- Understand the basics of Java Full Stack Development.
- Learn the fundamentals of Java programming.
- Understand the role of HTML, CSS, and JavaScript in web development.
- Gain basic knowledge of databases and APIs.
- Understand the importance of Git and GitHub for project management.
- Develop technical knowledge and practical understanding of the software development process.

Java Full Stack Development – Technologies & Learning

What Technologies Are Included in
Java Full Stack?

What is Java?

Java is a popular, high-level, object-oriented programming language used to develop different types of applications. It was designed to be platform-independent, which means that Java programs can run on different operating systems using the Java Virtual Machine (JVM). Java is widely used for developing web applications, mobile applications, desktop software, enterprise applications, and backend systems. Its features such as security, reliability, portability, and scalability make it one of the most widely used programming languages.

What is Java Full Stack Development?

Java Full Stack Development is the process of developing both the front-end and back-end parts of a web application using Java-based technologies. The front end is the part of the application that users see and interact with, while the back end handles the application logic, server-side processing, and database communication.

FOUR-WEEK INTERNSHIP LEARNING

During the four-week AICTE Internship in Java Full Stack Development, I gradually developed my understanding of web application development and the technologies used in the software industry.

Week 1: Introduction to Web Development

In the first week, I learned the basic concepts of web development and understood the difference between front-end and back-end development. I was introduced to HTML, CSS, and JavaScript and learned how these technologies are used to create and design web pages.

Week 2: Introduction to Java

In the second week, I learned about Java programming and its importance in software and back-end development. I gained an understanding of basic Java concepts and learned how Java can be used to develop reliable and scalable applications.

Week 3: Full Stack Technologies

In the third week, I learned about the different components of Java Full Stack Development, including databases, APIs, and the connection between the front end and back end. I understood how data is stored, managed, and transferred between different parts of an application.

Week 4: Project Understanding and Practical Learning

In the fourth week, I reviewed the concepts learned during the internship and developed a better understanding of the complete web development process. I learned about project organization and the use of Git and GitHub for managing and uploading project files. This week helped me connect my theoretical knowledge with practical application.

Overall Learning

The four-week internship helped me understand the fundamentals of Java Full Stack Development. I gained knowledge of web development, Java programming, databases, APIs, and development tools. The internship provided me with a strong foundation for continuing my technical learning and developing more advanced skills in the future.

SKILLS AND KNOWLEDGE GAINED

During the four-week AICTE internship, I gained basic knowledge of Java Full Stack Development and the technologies used in modern web development. I learned about Java programming, HTML, CSS, JavaScript, databases, APIs, Git, and GitHub. I also developed an understanding of how front-end and back-end technologies work together to create complete web applications. The internship improved my technical knowledge, problem-solving skills, project organization, and confidence in learning new technologies. Overall, this internship provided me with a strong foundation for further learning and development in the field of software technology.

Conclusion and Future Scope

The four-week AICTE Internship in Java Full Stack Development provided me with valuable knowledge about Java, web development, databases, APIs, and development tools. I learned how front-end and back-end technologies work together to create complete web applications. This internship improved my technical understanding, problem-solving skills, and confidence in learning new technologies.

In the future, I aim to further improve my knowledge of Java, Spring, databases, APIs, and advanced web development technologies. I also plan to gain more practical experience by working on real-world projects and developing advanced skills in Java Full Stack Development.
